NATIONAL LEADERS IN MEDICINE

Presentation Topics

1. Introduce our Team
2. Explain What We Do
3. Describe our Workflow
4. Share how our lab uses Open Specimen
 - Labeling, Barcoding, Tracking, Reports
5. Briefly review Next Steps to enhance our processes
6. Suggest ideas for Improvement

Gynecologic Oncology Biorepository Team

Mary M. Mullen, MD
Assistant Professor
Gynecologic Oncology

Rachel Abbott
Senior Clinical
Research Coordinator

Olivia Graham

Jimmy Rodriguez
Clinical Research Technician

GynOnc Biorepository Mission Statement

Our mission is to support clinical, translational and basic research focused on gynecologic malignancies through collecting, storing and distributing biospecimens for research purposes.

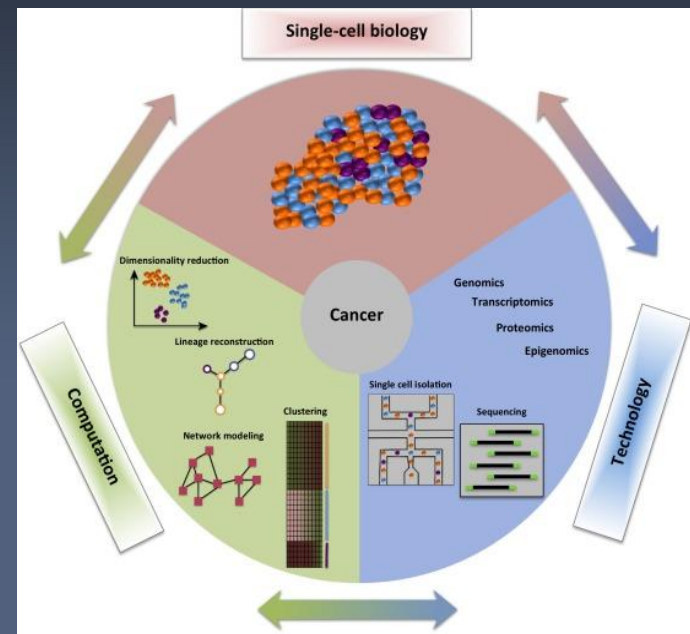

GynOnc Biorepository Services

- Standard clinical specimen processing

Genomic Analysis
Traditional & Single-Cell Transcriptomic Analysis
Spatial Transcriptomic Analysis
Proteomic Analysis
Metabolomics Analysis
Primary Tumor Cell Generation
Serum Marker Analysis
Germline Genomic Analysis
Organoid Generation
Circulating Tumor DNA/RNA Analysis

- Barcoded tracking of specimens
- Immediate and long-term storage
- Distribution of specimens
- Correlated clinical data

GynOnc Biorepository Workflow

Candidate patients are identified on the GYNONC surgery schedule

Consent is obtained from the patient for approval to collect specimens

The patient is registered in REDCap which initiates a data push to Open Specimen (API)

Tissue, blood & ascites are collected in the OR & processed

Specimens are entered into Open Specimen for labeling & tracking

Specimens are stored in the specified container and position

Specimen Collection Goals for 1 Surgery

1. Tissue / Flash Frozen (FF)
 - Primary tumor & 4 Mets
2. Tissue / Formalin-Fixed Paraffin-Embedded (FFPE)
 - Primary tumor & 4 Mets
 - ↳ H&E slides
3. Tissue / Optimal Cutting Temperature Embedded (OCT)
 - Primary tumor & 4 Mets
 - ↳ H&E slides
4. Tissue / Organoids
 - Primary tumor & Mets
5. Blood
 - Serum
 - Buffy Coat
 - Plasma
 - Cell-Free DNA
6. Ascites
 - Organoids
 - Primary Ovarian Cancer Cells (POVs)

Tracking Methods

- Framework for labeling & tracking
- Tools to create customizable queries - IMPERATIVE
- Create targeted pull lists
- Bulk specimen distribution – audit trail and automatic specimen quantity updates

- Record a deep level of patient clinical data including medical history, pathology, chemotherapy, genetic mutations, and progression of disease

How our lab uses Open Specimen

OPENSPECIMEN

a krishagni product

Two Initial Configuration Steps:

1) Collection Protocol

Collection Protocols
GYN ONC Tissue Bank

Events

- Surgery 1
- Surgery 2
- Core Biopsy
- Paracentesis
- Add Event...

Specimen Requirements

Name	Type	Quantity
<input checked="" type="checkbox"/> Malignant Frozen Tissue (FF - Primary)	Frozen Tissue	1000 gm
<input checked="" type="checkbox"/> Metastatic Frozen Tissue (FF - Met 1)	Frozen Tissue	1000 gm
<input checked="" type="checkbox"/> Metastatic Frozen Tissue (FF - Met 2)	Frozen Tissue	1000 gm
<input checked="" type="checkbox"/> Metastatic Frozen Tissue (FF - Met 3)	Frozen Tissue	1000 gm
<input checked="" type="checkbox"/> Metastatic Frozen Tissue (FF - Met 4)	Frozen Tissue	1000 gm
<input checked="" type="checkbox"/> Malignant Body Cavity Fluid (Ascites)	Body Cavity Fluid	1000 ml
<input checked="" type="checkbox"/> Buffy Coat	Buffy Coat	10 ml
<input checked="" type="checkbox"/> Plasma	Plasma	10 ml
<input checked="" type="checkbox"/> Serum	Serum	10 ml
<input type="checkbox"/> Malignant Fixed Tissue Block (OCT - Primary)	Fixed Tissue Block	1 count
<input type="checkbox"/> Metastatic Fixed Tissue Block (OCT - Met 1)	Fixed Tissue Block	1 count
<input type="checkbox"/> Metastatic Fixed Tissue Block (OCT - Met 2)	Fixed Tissue Block	1 count
<input type="checkbox"/> Metastatic Fixed Tissue Block (OCT - Met 3)	Fixed Tissue Block	1 count
<input type="checkbox"/> Metastatic Fixed Tissue Block (OCT - Met 4)	Fixed Tissue Block	1 count
<input checked="" type="checkbox"/> Malignant Fixed Tissue Block (FFPE - Primary)	Fixed Tissue Block	1 count
<input type="checkbox"/> Derived Fixed Tissue Slide-H/E (H&E - Primary)	Fixed Tissue Slide-H/E	1 count
<input type="checkbox"/> Derived Fixed Tissue Slide-H/E (H&E - Primary)	Fixed Tissue Slide-H/E	1 count

2) Establish Containers

Containers Showing 6 records

	Name	Site	Created By	Dimension	Stored Specimens	Approximate Capacity	Occupied v/s Free

Customizable "Nth Step"

- Additional step utilized to capture data pertinent to our lab's objectives and processes:
 - Anatomical site
 - Laterality

Parent Specimen Details

Label		Anatomical Site		Anatomic site (free text area)	Anatomical Position	Laterality
TB.4920.FF_30	FF - Primary	Ovary	x			Right
TB.4920.FF_31	FF - Met 1	Omentum	x			Not Specified
TB.4920.Plasma_32	Not Specified	Blood	x			Not Specified
TB.4920.Serum_33	Not Specified	Blood	x			Not Specified
TB.4920.FFPE_34	FFPE - Primary	Ovary	x			Right
TB.4920.FFPE_35	FFPE - Met 1	Omentum	x			Not Specified

- Soon to be incorporated:
 - Cancer subtype
 - Stage
 - Grade
 - Ischemia time
 - Presence of hemolysis

Specimen Labels Printed

Description	Label	Location

Reports

All specimens have been labeled, barcoded and stored.

Queries!!!

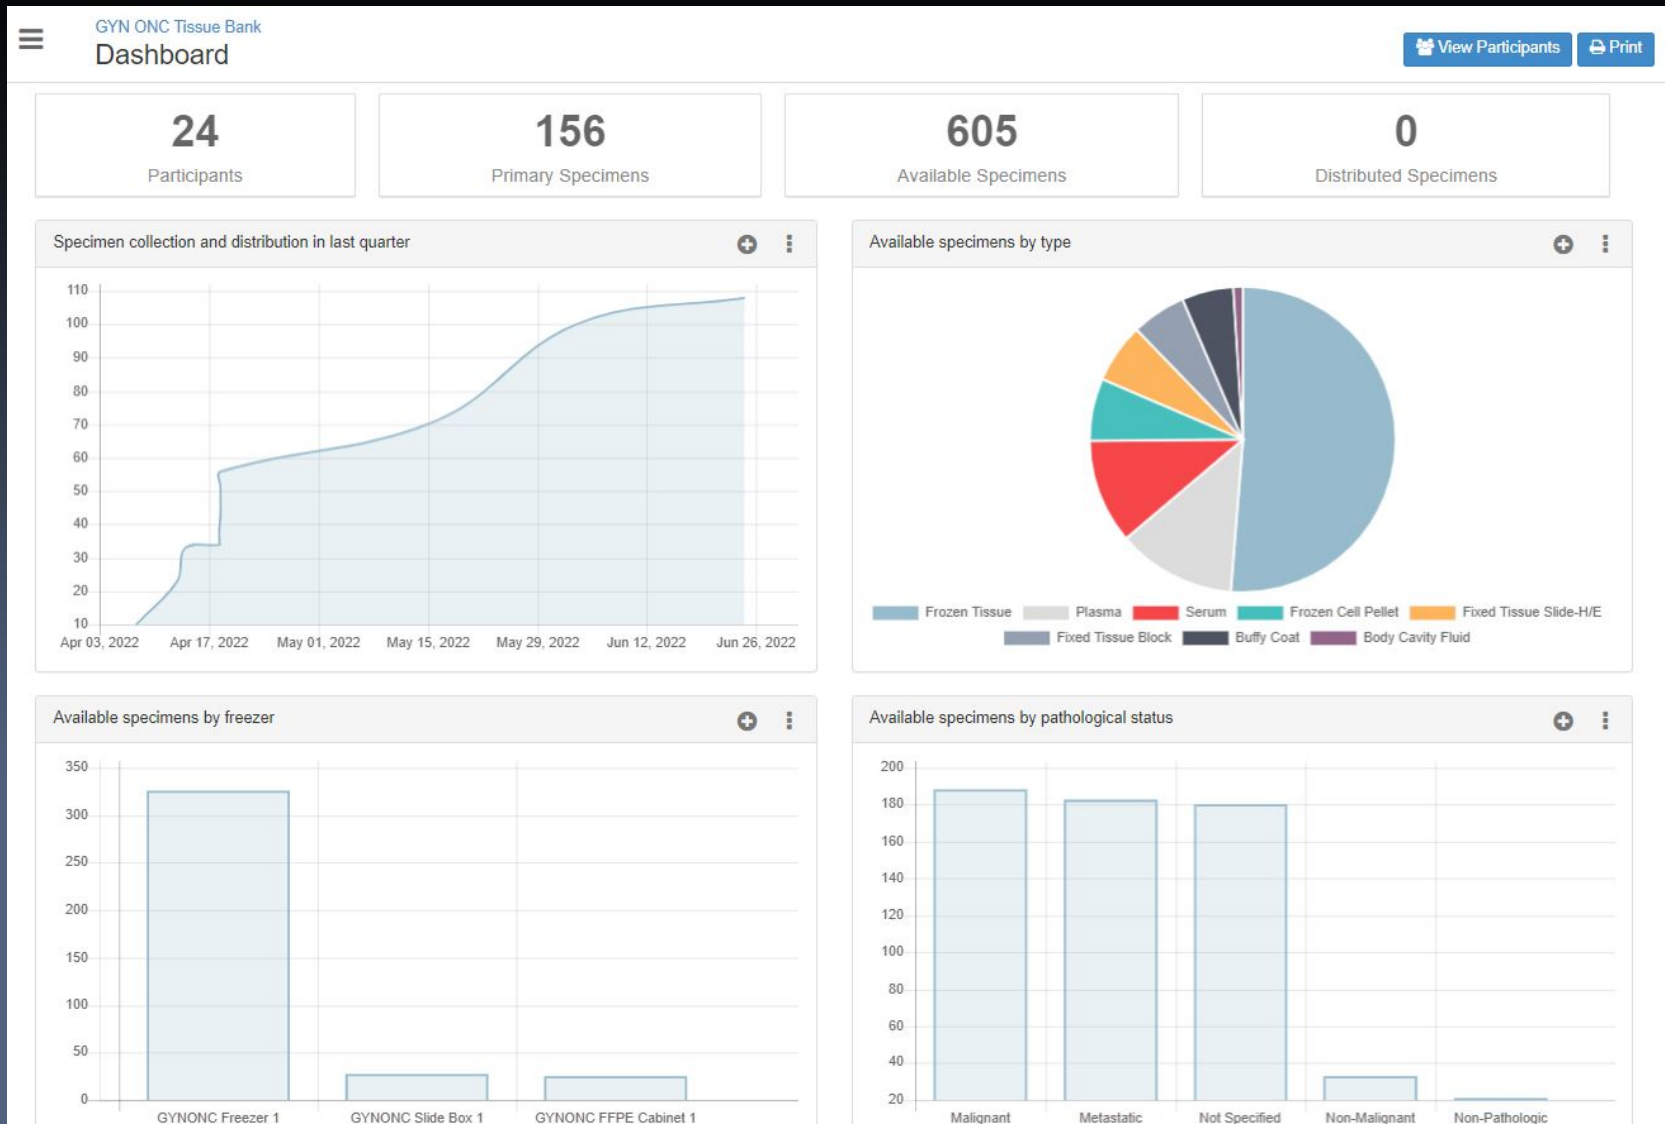

- 1) How many serum specimens are available from OVCA patients with high-grade serous cancer?
- 2) How many FFPE samples are available from EMCA patients? Do these have matched FF tissue?
- 3) What was the average ischemia time for all FF tissue samples from the last 6 months?
- 4) How many OVCA specimens did we collect last year? What were the cancer subtypes?

Reports: How to work with the Data

Dashboard

- To establish a Workflow for specimen distribution
- Incorporate more clinical data within Open Specimen
- Become more savvy with Query capabilities as the options are limitless!

Suggestions for Improvement

- Automatic data pull from Epic to Open Specimen
- An "undo" or back button
- More descriptive error messages
- Upload consent form / Upload scanned image (H&E slide)
- API integration from Traditional REDCap to Open Specimen – in order to map clinical data on a specimen-level

THANK YOU!

rachelabbott@wustl.edu
